PROFESSIONAL SUMMARY

Graduate Chemical Engineer with industrial exposure in refinery operations, process monitoring, quality control, and industrial safety. Experienced in edible oil refining, palm oil fractionation, and sulphonation plant operations, with undergraduate research in biodiesel production, catalyst synthesis, modelling, and optimization. Seeking NYSC placement opportunity to contribute in process engineering, plant operations, production support, energy, or related technical roles.

EDUCATION

University of Benin, Benin City, Nigeria

B.Eng. Chemical Engineering, Sept 2023

CGPA: 4.3/5.0

INDUSTRIAL EXPERIENCE

Chemical Engineer, PZ Wilmar Nigeria Limited, Lagos, Nigeria | 2024–2025

- Supported edible oil refinery operations involving crude palm oil processing into refined edible oil products and fractions.
- Gained practical exposure to refining, fractionation, separation, process monitoring, and quality control.
- Developed understanding of plant workflow, industrial safety, and large-scale manufacturing operations.

Industrial Training Intern, Reliance Chemical Products Ltd., Agbara, Ogun State | Jan 2022 – May 2022

- Completed industrial training in a sulphonation plant involved in LABSA-related chemical manufacturing.
- Observed plant operations, utilities, workflow monitoring, and safety practices in chemical production.
- Built foundational experience in industrial process operations and manufacturing systems.

UNDERGRADUATE RESEARCH

Undergraduate Researcher, Department of Chemical Engineering, University of Benin | 2023

Project: Synthesis of Bio-Based Heterogeneous Catalyst from Periwinkle Shells and Welders' Waste for Biodiesel Production Using Neem Seed Oil: Modelling and Optimization Studies

Supervisor: Engr. Prof. K. O. Obahiagbon

- Conducted research on waste-derived catalyst synthesis for biodiesel production.
- Investigated neem seed oil as renewable feedstock for sustainable fuel production.
- Applied modelling and optimization methods to study biodiesel production conditions.

TECHNICAL SKILLS

Chemical Engineering: Process operations, process monitoring, quality control, edible oil refining, palm oil fractionation, sulphonation exposure, process safety, sustainable fuels

Modelling/Simulation: Aspen HYSYS, process modelling, optimization

Engineering Tools: AutoCAD, SolidWorks

Programming/Data: Python, Rust, C++, JavaScript, SQL, data processing, analytical workflows

Other Tools: Git, Docker

ADDITIONAL TECHNICAL EXPERIENCE

Backend / Software Engineer | 2023–Present

- **Built reliable backend systems and analytical software with focus on testing, correctness, and problem-solving.**
- **Applied computational skills relevant to modelling, optimization, technical analysis, and data-driven workflows.**

OPEN-SOURCE CONTRIBUTIONS

- **WebKit:** Contributed to WebDriver BiDi implementation in a large-scale browser engine codebase.
- **can-viewer-rs:** Implemented DBC editor and serializer functionality in Rust.
- **rusty-caravel / rsomeip:** Added parser improvements, integration tests, and protocol tooling support.
