PROFESSIONAL SUMMARY

Graduate Chemical Engineer and prospective NYSC corps member with academic and industrial exposure in edible oil refining, palm oil fractionation, sulphonation process operations, process monitoring, quality control, and sustainable fuel research. Undergraduate research focused on bio-based heterogeneous catalyst synthesis and biodiesel production from neem seed oil, with modelling and optimization studies. Interested in process engineering, gas/energy operations, production support, safety, and sustainable industrial systems. Also experienced in computational analysis and software development, with strong analytical, problem-solving, and technical reporting skills.

EDUCATION

University of Benin, Benin City, Nigeria

B.Eng. Chemical Engineering, September 2023

CGPA: 4.3/5.0

INDUSTRIAL EXPERIENCE

Chemical Engineer

PZ Wilmar Nigeria Limited, Lagos, Nigeria

2024–2025

- Supported edible oil refinery operations involving the processing of crude palm oil into refined edible oil products and palm oil fractions.
- Gained hands-on exposure to refining, fractionation, separation, process monitoring, and quality control in a large-scale manufacturing environment.
- Developed practical understanding of plant process flow, process operations, industrial safety, and food-grade production standards.
- Strengthened applied knowledge of chemical engineering principles in industrial production and operations.

Industrial Training Intern

Reliance Chemical Products Limited, Agbara, Ogun State, Nigeria

January 2022 – May 2022

- Completed industrial training in a sulphonation plant involved in LABSA-related chemical manufacturing.
- Gained exposure to plant operations, utilities, workflow monitoring, and industrial safety practices.
- Observed the application of chemical engineering principles in large-scale chemical production.
- Built foundational experience in manufacturing systems and process operations.

UNDERGRADUATE RESEARCH

Undergraduate Researcher

Department of Chemical Engineering, University of Benin, Benin City, Nigeria

2023

Project: Synthesis of Bio-Based Heterogeneous Catalyst from Periwinkle Shells and Welders' Waste for Biodiesel Production Using Neem Seed Oil: Modelling and Optimization Studies

Supervisor: Engr. Prof. K. O. Obahiagbon

- Conducted undergraduate research on catalyst synthesis from waste-derived materials for biodiesel production.
- Investigated neem seed oil as a renewable feedstock for sustainable fuel production.
- Studied catalyst performance and process variables affecting biodiesel yield and efficiency.
- Applied modelling and optimization methods to evaluate biodiesel production conditions.
- Prepared and submitted a B.Eng. thesis under faculty supervision.

TECHNICAL SKILLS

Chemical Engineering: Process operations, process monitoring, quality control, edible oil refining, palm oil fractionation, sulphonation process exposure, process safety, sustainable fuels

Process Modelling/Simulation: Aspen HYSYS, process modelling, optimization

Engineering Tools: AutoCAD, SolidWorks

Computation: Python, Rust, C++, JavaScript, SQL, data processing, analytical workflows

Other Tools: Git, Docker

ADDITIONAL COMPUTATIONAL EXPERIENCE

Experienced in backend engineering, analytical programming, and computational problem-solving. Skills include data preprocessing, modelling workflows, software reliability, testing, and systems thinking applicable to process analysis, optimization, and technical problem-solving.
